

FRAXINUS VELUTINA

Arizona Ash

Moderate water

Full sun to part shade

Rabbit resistant

Deer resistant

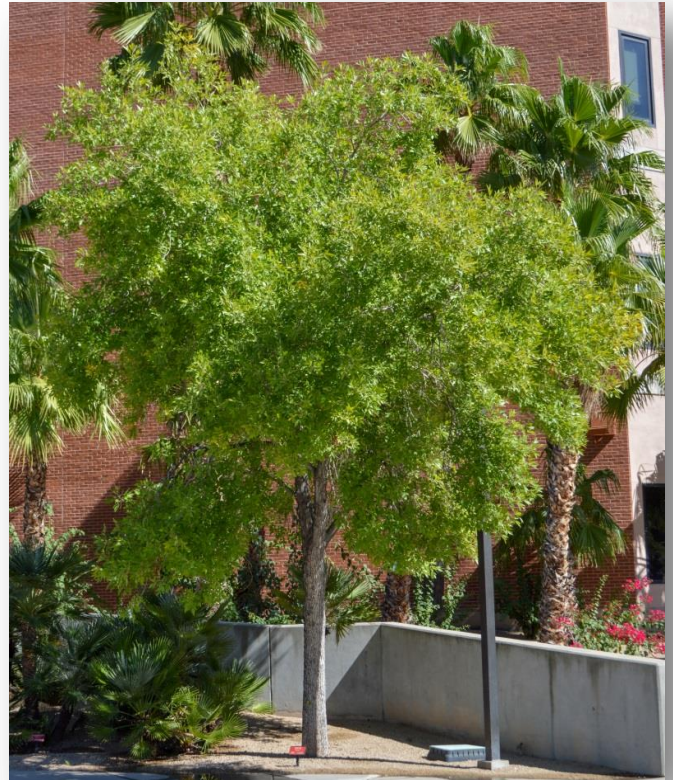

Native to N. Mexico, SW U.S.

Why we love it...

It's easy to spot Arizona Ash in the fall, when cooler temperatures transform the tree's bright green foliage to a glowing golden hue. This native tree is fast growing and deciduous, dropping its leaves for a brief period of winter dormancy after a spectacular show of autumn color.

Small, non-ornamental flowers appear along the tree's branches in spring, followed by clusters of ornamental one-winged fruits that cling to female trees through summer. Since Arizona Ash is typically grown from these seeds rather than cuttings, there can be a lot of genetic variety from tree to tree, with each specimen displaying unique character and form.

Lydia says: Like many deciduous trees, Arizona Ash offers exceptional shade in the summer and allows extra light and warmth when leaves are absent in the winter.

Deciduous Tree: *Fraxinus velutina*

Size (H x W): 40-50 feet x 25-30 feet

Blooms: Inconspicuous flowers in spring

Exposure: Full sun to part shade

Hardiness Zone: -10° F, USDA Zone 6

Water: Moderate

Pruning: Late winter

Growth Rate: Fast
