

# CYCAS REVOLUTA

## Sago Palm

 Low to moderate water

 Full sun to part shade

 Deer resistant

 Rabbit resistant

 Native to Japan

### Why we love it...

The Sago Palm has been called “the living fossil” because it can be traced back to the prehistoric era, approximately two hundred million years ago, when dinosaurs walked the earth. It can now be found in many gardens and landscapes around the world. Rich, deep green leaves grow in a fountain-like habit and much older specimens will develop trunks, making this Cycad resemble a small palm tree. The Sago Palm is impressively tolerant of difficult conditions, but performs the best in full to partial shade. Sago Palm is extremely clean and requires absolutely no maintenance. It is a very neat and symmetrical looking plant, and looks great in containers or in the ground.

**Lydia says:** Sago Palm is typically slow growing, but growth can be increased by fertilizing at the beginning of the growing season.

**Palm:**  
*Cycas revoluta*

**Size (H x W):** 8-10 feet x 3-6 feet

**Blooms:** Brown in summer, only on mature specimens

**Exposure:** Full sun to part shade

**Hardiness Zone:** 15° F, USDA Zone 8

**Water:** Low to moderate

**Pruning:** None

**Growth Rate:** Slow to moderate
