

PYRUS CALLERYANA 'ARISTOCRAT'

Aristocrat Flowering Pear

 Moderate water

 Full sun to part shade

 Native to

Why we love it...

'Aristocrat' is an improved variety of Flowering Pear that features a strong and wide pyramidal branching structure with a distinct central leader, and superior disease resistance. These fruitless trees are notorious for their dramatic seasonal changes. Blooming begins in early spring as profuse clusters of pure white flowers decorate leafless branches, creating an enchanting white glow in the landscape. In late spring, after flowers fade, the branches are clothed through the summer by dark green, glossy leaves with distinctive wavy margins. In fall, Aristocrat Flowering Pear's foliage can vary in color from reddish-purple to yellow; bestowing your garden with even more seasonal interest before dropping its leaves to bare an intricately branched frame through the winter.

Lydia says: Flowering Pear likes deep, moisture-rich soil, and will do best with deep, regular watering until it is established in the landscape.

Deciduous Tree: *Pyrus calleryana 'Aristocrat'*

Size (H x W): 35-40 feet x 15-20 feet

Blooms: White in late winter to early spring

Exposure: Full sun to part shade

Hardiness Zone: -20° F, USDA Zone 5

Water: Moderate

Pruning: March, after flowering

Growth Rate: Moderate to fast
