

LANTANA MONTEVIDENSIS 'WHITE'

Trailing White Lantana

 Low to moderate water

 Full sun to part shade

 Attracts butterflies

 Rabbit resistant

 Deer resistant

 Native to South America

Why we love it...

Every landscape in the Southwest should have at least one of these heat and drought tolerant beauties! They seem to be made specifically for our arid climate, greeting the scorching desert heat with solid blankets of white flowers that butterflies find enticing. Trailing White Lantana is a fast grower that stays low and spreads wide, forming a full, dense groundcover in a single growing season. The small, sandpapery leaves are true-green and strongly aromatic when disturbed. This distinctive aroma offends the sensitive noses of rabbits and deer, causing them to bypass lantana for tastier treats, thus leaving the rich flowers to be enjoyed by everyone else. Try this plant in containers or on banks, where its cascading habit really shines!

Lydia says: Improve the appearance of your Lantana by pruning after the last chance of frost to reshape the plant and remove frost-damaged branches.

Perennial Groundcover: *Lantana montevidensis 'White'*

Size (H x W): 1-2 feet x 3-6 feet

Blooms: White, from spring to first frost

Exposure: Full sun to part shade

Hardiness Zone: 15° F, USDA Zone 8

Water: Low to moderate

Pruning: Early spring

Growth Rate: Fast
