

LANTANA CAMARA 'RADIATION'

Radiation Lantana

 Low to moderate water

 Full sun to part shade

 Attracts butterflies

 Rabbit resistant

 Deer resistant

 Hybrid origin

Why we love it...

Every Landscape in the southwest should have at least one of these drought tolerant, colorful beauties! They seem to be made for our arid climate, greeting the scorching desert heat with clusters of dark orange to yellow flowers that butterflies and hummingbirds find irresistible. 'Radiation' is one of the taller shrub lantanas that has proven itself as a desert survivor in the Tucson area. Its dark green, aromatic leaves feel like sandpaper and are highly resistant to browsing by insects, rabbits, and deer. Radiation Lantana can be grown in containers, and performs well in the intense reflected heat from walkways, patios and south or west-facing walls.

Lydia says: Improve the appearance of your Lantana by pruning after the last winter frost to reshape the plant and remove frost-damaged branches.

This plant is included in our Civano Select™ collection. Civano Select™ plants are handpicked by our horticulturalist for quality, form and health!

Perennial Shrub: *Lantana camara 'Radiation'*

Size (H x W): 3-5 feet x 3-5 feet
