

# ACACIA REDOLENS

## Spreading Acacia

Low

Full sun to  
light shade

Native to  
Australia

### Why we love it...

If you're looking to cover a large amount of ground with a small amount of dollars, then Spreading Acacia should be at the top of your list of plants to buy! This evergreen groundcover saves money by tolerating extreme heat and drought, growing in poor soil, preventing soil erosion, and quickly covering up to 15 feet of ground per plant! It does tiny yellow flowers in late winter that aren't much to look at individually, but when blooming in mass they provide a charming contrast to Spreading Acacia's leathery grey-green foliage. Requiring very little work to maintain, this helpful Australian native provides great solutions for many of our toughest desert gardening woes!

**Lydia says:** Spreading Acacia will put on more height when planted in tight spaces, so give it plenty of room if you want to encourage it to stay low to the ground!

### Evergreen Groundcover: *Acacia redolens*

**Size (H x W):** 2-5 feet x 6-15 feet

**Blooms:** Yellow in late winter to early spring

**Exposure:** Full sun to light shade

**Hardiness Zone:** 15° F, USDA Zones 8
