

# MYOPORUM PARVIFOLIUM

## Myoporum

 Low to moderate water

 Full sun to part shade

 Native to Australia

### Why we love it...

Myoporum is a long-used evergreen groundcover that is being rediscovered as a fantastic landscape plant for the xeric southwest. Its spreading, succulent stems are densely packed with small, light green leaves, and they quickly take root anywhere they touch the ground if moisture is available, forming a thick mat wherever they spread. Once established, Myoporum is very drought tolerant and grows quickly, making it an ideal choice for erosion control along banks and slopes. Its small white flowers appear in spring and summer with a light, sweet fragrance that is reminiscent of honey. Plant this neat-looking groundcover in well-drained soil wherever you'd like to have a year-round carpet of green!

**Lydia says:** Myoporum does best when placed where it won't get walked on, as its succulent stems can be quite brittle and intolerant of foot traffic.

This plant is included in our Civano Select™ collection. Civano Select™ plants are handpicked by our horticulturalist for quality, form and health!

### Evergreen Groundcover: *Myoporum parvifolium*

**Size (H x W):** 1-2 feet x 6-8 feet

**Blooms:** Tiny white flowers, spring through summer

**Exposure:** Full sun to part shade

**Hardiness Zone:** 18° F, USDA Zone 8

**Water:** Low to moderate

**Pruning:** Winter

**Growth Rate:** Moderate to fast
