

LEUCOPHYLLUM REVOLUTUM

Little Leaf Texas Ranger

 Low to moderate water

 Full sun to part shade

 Native to Mexico

Why we love it...

Little Leaf Ranger is a very unique member of the Leucophyllums; a group of plants known for their cold tolerance, drought resistance and love for hot, sunny climates. This shrub is easily distinguishable from other Leucophyllum species by its small, oblong leaves that are thick and succulent, ranging from green to grey-green in color. Little Leaf Ranger is valued for its superior cold tolerance and its tendency to bloom later in the year than its counterparts. Cooler fall temperatures will inspire a profuse display of large, purple flowers when most of the other Leucophyllums are wrapping up their blooming cycles for the year.

Lydia says: Little Leaf Ranger prefers sandy, well-drained soil and should only be pruned in early spring for the best show of fall flowers.

Evergreen Shrub: *Leucophyllum revolutum*

Size (H x W): 4 feet x 4-5 feet

Blooms: Lavender-purple, summer through fall

Exposure: Full sun to part shade

Hardiness Zone: 10° F, USDA Zone 7

Water: Low to moderate

Pruning: Spring

Growth Rate: Moderate to fast
