

ANTIGONON LEPTOPUS

Queen's Wreath Vine

 Low to moderate water

 Full sun to part shade

 Attracts butterflies

 Native to Mexico

Why we love it...

Queen's wreath is a fast-growing, self-climbing vine with bright green, heart-shaped foliage. Light pink to hot pink blossoms appear amongst foliage in chain-like clusters throughout spring, summer, and fall; birds are especially attracted to them. Queen's Wreath loves hot spots in the garden, including hot walls with reflected sun.

This deciduous vine will happily grow up any nearby support, whether it is a strategically placed trellis, chain link fence, or even a large shade tree. Allow Queen's Wreath to grow where its graceful flowers and foliage will drape or intermix it with another vine, such as a climbing rose, for a striking display of color. Landscape Queen's Wreath alongside other hot flowering shrubs like yellow bells or red bird of paradise.

Lydia says: Queen's Wreath may die back in the winter, but it regrows quickly as the weather warms back up.

Deciduous Vine: *Antigonon leptopus*

Size (H x W): 30-40 feet x 20-30 feet (with support)

Blooms: Pink, red, or white in summer and fall

Exposure: Full sun to part shade

Hardiness Zone: 20° F, USDA Zone 9

Water: Low to moderate

Pruning: Winter to early spring

Growth Rate: Moderate to fast
