

CALYLOPHUS BERLANDIERI 'TUCSON SUN' Tucson Sun Sundrops

 Low to moderate water

 Full sun to part shade

 Southwest U.S., Mexico

Why we love it...

This Civano Nursery selection was chosen for its tidy growth habit, generous flower production and exceptional heat resistance. Sundrops are fancied for their large, buttercup-shaped flowers that open with a creamy-yellow color and fade to orange and then pink before finishing completely within 24 hours. Blooming lasts from spring through summer, making 'Tucson Sun' one of the most colorful groundcovers available in the Southwest! It is also one of the toughest groundcovers, spreading from hardy, rhizomous roots that withstand periods of drought and temperatures as low as 5°F. 'Tucson Sun' looks incredible when planted in large groups on slopes, when mixed in with other perennials in borders, and when featured alone in containers.

Lydia says: Cut your Tucson Sun Sundrops back periodically to remove spent flowers and promote new growth with fresh blooms!

This shrub is part of our American Beauties Native Plants® collection. Purchasing American Beauties Native Plants® helps to support the National Wildlife Federation® and their mission to protect wildlife!

Perennial Groundcover: *Calylophus berlandieri* 'Tucson Sun'

Size (H x W): 1 foot x 2-3 feet

Blooms: Yellow, March-June

Exposure: Full sun to part shade

Hardiness Zone: 5° F, USDA Zone 7

Water: Low to moderate

Pruning: Early spring

Growth Rate: Moderate to fast
